KEEBMONKEY MEGALODON · KB16-01 · 16 KEYS · 3 DIALS · 4 LAYERS

Megalodon Macropad Map

0 Base → 1 Cursor → 2 Terminal → 3 Obsidian ↺ back to Base

The pad lights up in the layer's colour, so you can see where you are: **blue** Base, **orange** Cursor, **green** Terminal, **purple** Obsidian. Keys that do nothing on a layer stay dark. Press the **right small dial** to step to the next layer, and the **big dial** to jump home to Base. The top row is the same on every layer.

RUNS ⏎ safe command, presses Enter for you · TYPES you check it, then press Enter · ★ bind once in Obsidian · ? confirm in Cursor · Meh = Ctrl+Shift+Alt

Bind these in Obsidian

Settings → Hotkeys, search the command, click the plus, then press the pad key.

- Daily notes: Open today's daily note `Meh+D`
- Templates: Insert template `Meh+I`
- Toggle left sidebar `Meh+[`
- Toggle right sidebar `Meh+]`
- Split right `Meh+\`

Why the terminal layer is different

- Copy, paste and find use `Ctrl+Shift`, since `Ctrl+C` stops the running command.
- Save is off. `Ctrl+S` freezes Ptyxis output; `Ctrl+Q` unfreezes it.
- The big dial scrolls, because `Ctrl+Z` suspends the running program.
- Clear is typed as `clear` so Cursor's `Ctrl+L` chat can't grab it.

Check in Cursor

These follow the VS Code Linux defaults. If one misfires, reassign it in Cursor or on the pad.

- Format document `Ctrl+Shift+I`
- Toggle sidebar `Ctrl+B`

Layout file: `cdncampbell-KB16_01.layout.json`. The layer colours come from the custom QMK firmware, not VIA. Reload the layout in VIA after flashing.
